

On a mild day of 80 degrees, in 10 minutes the inside a vehicle can rise to 99 degrees, 20 minutes to 109, and 60 minutes to 123. The sun's radiation heats objects inside the vehicle then these objects heat the air inside the vehicle.

A child's body heats up 3-5 times faster than that of an adult. Heatstroke can occur when the core body temperature reaches 104 degrees and internal organs begin to shut down. Once the body reaches 107 degrees, the person dies. Symptoms can progress to flushed dry skin and vomiting to seizures, organ failure and death. Every week in the U.S. a child dies from being left alone in a car. Most were forgotten by the parents and younger than 2 years.

# where's Baby?

NHTSA.gov

## Leave Reminders!

Leave a briefcase, purse, cell phone-something needed at your final destination

## Take Baby with You!

Never leave a child alone in a motor vehicle

## Lock Your Car!

Keep your car locked when you're not in it so children are unable to climb in on their own

## See a Child Alone – Call 911!

See a child alone, call 911. Save a Life, Save a Child!
